

IN THE UNITED STATES DISTRICT COURT FOR THE
NORTHERN DISTRICT OF OKLAHOMA

W. A. DREW EDMONDSON, in his)
capacity as ATTORNEY GENERAL)
OF THE STATE OF OKLAHOMA and)
OKLAHOMA SECRETARY OF THE)
ENVIRONMENT C. MILES TOLBERT,)
in his capacity as the)
TRUSTEE FOR NATURAL RESOURCES)
FOR THE STATE OF OKLAHOMA,)
Plaintiff,)
vs.) 4:05-CV-00329-TCK-SAJ
TYSON FOODS, INC., et al,)
Defendants.)

VOLUME I OF THE VIDEOTAPED
DEPOSITION OF BERTON FISHER, PhD, produced as a
witness on behalf of the Defendants in the above
styled and numbered cause, taken on the 3rd day of
September, 2008, in the City of Tulsa, County of
Tulsa, State of Oklahoma, before me, Lisa A.
Steinmeyer, a Certified Shorthand Reporter, duly
certified under and by virtue of the laws of the
State of Oklahoma.

TULSA FREELANCE REPORTERS
918-587-2878

1 been applied to a stream or the lake?

2 A In the sense of doing a causation pathway
3 analysis as Roger Olsen has done, yes. In terms of
4 looking at a single field all the way to a stream or
5 lake, no. 11:00AM

6 Q Okay. Now, with respect to edge of field
7 samples, you'll agree with me that the mere fact
8 that a constituent has run off of a pasture and been
9 collected in an edge of field sample does not
10 guarantee that that constituent reaches a stream, 11:00AM
11 the Illinois River or Lake Tenkiller; correct?

12 A It says that constituent is on its way in that
13 direction.

14 Q Do they all get there?

15 A They all get there eventually. 11:01AM

16 Q They all get there? Everything that runs off
17 the edge of the field eventually makes its way to
18 Lake Tenkiller; is that your opinion?

19 A I would say that everything that runs off the
20 edge of a field ultimately gets into drainage 11:01AM
21 because it --

22 Q My question --

23 A There's some fraction that does.

24 Q Some fraction from every field or some
25 fraction from all of the fields? 11:01AM

1 A What's the difference between some fraction
2 from every field and some fraction from all the
3 fields?

4 Q Well, the difference is between which a
5 particular contract grower's actions are 11:01AM
6 contributing or not.

7 MR. GARREN: Object to form.

8 A Some fraction of all runoff in my opinion
9 would make it into the drainageways and into Lake
10 Tenkiller. 11:01AM

11 Q What have you done to test that opinion?

12 A We certainly see that there are waste as you
13 see the chain -- the pathway analysis. You see that
14 material is disposed in fields. You see that edge
15 of field samples contain high concentrations of 11:02AM
16 phosphorus and certain metals that are indicative of
17 poultry waste. You see that those materials are
18 also in stream sediments. You see that the
19 phosphorus numbers are going into Lake Tenkiller and
20 you see an association between, for example, chicken 11:02AM
21 house density and phosphorus in high flow samples.
22 I think that the -- that that analysis is pretty
23 conclusive that material that was put on the ground
24 as poultry waste ends up in Lake Tenkiller. Now, if
25 you look at any individual field, if any material 11:02AM

TULSA FREELANCE REPORTERS
918-587-2878

1 balance under the direction of Bernie Engel with my
2 input.

3 Q Did you undertake any statistical or
4 scientific analysis that would allow you to offer an
5 opinion of your own regarding the relative
6 contribution of poultry litter to phosphorus loads?

11:43AM

7 A Well, simply reviewing the information that's
8 present in the literature, reviewing the information
9 from Meagan Smith and reviewing the data in the

10 sediment cores, along with the population changes in

11:44AM

11 poultry in the basin, I guess you could say I did
12 because I looked at a coalescence or a concordance

13 of information between what I saw in sediment cores,
14 poultry populations and what I was getting in terms

15 of mass balance issues from Meagan Smith and Bernie

11:44AM

16 Engel, and so in that sense, yeah, I mean I have an
17 independent line of evidence that supports the mass
18 balance numbers.

19 Q Okay. Have you been asked to determine a
20 quantitative contribution of poultry litter to the
21 phosphorus loads in the Illinois River watershed?

11:44AM

22 A I was asked to assist in doing that. I wasn't
23 asked to do it.

24 Q As we sit here today, Dr. Fisher, do you have
25 a quantitative opinion as to the relative

11:45AM

1 contribution of poultry litter to phosphorus loads
2 in the Illinois River or Lake Tenkiller?

3 A I would adopt the opinions that have been
4 expressed by the other experts in this matter.

5 Q Do you have an opinion that's based on your 11:45AM
6 own independent evaluation of that question?

7 A With respect to --

8 MR. GARREN: Object to form.

9 A I would say based upon my sediment core
10 information, that I have data that supports their 11:45AM
11 estimates.

12 Q Well, what's your opinion as to the relative
13 contribution of poultry litter as either a
14 percentage or however else you want to quantify it?

15 A Overwhelmingly dominant. 11:45AM

16 Q Well, give me a number.

17 A In excess of 70 percent.

18 Q In excess of 70 percent, and you base that on
19 what?

20 A I base that upon the mass balance work that 11:45AM
21 was done by Meagan Smith under Dr. Engel's direction
22 and with my input, and I base that upon the
23 extremely strong correlation between total
24 phosphorus concentration in the lake sediment cores
25 over time that corresponds in time to the buildup in 11:46AM

TULSA FREELANCE REPORTERS
918-587-2878

1 poultry population within the Illinois River
2 watershed.

3 Q You discuss sediment cores in your expert
4 report; correct?

5 A I do. 11:46AM

6 Q Can you point me in your report where you've
7 expressed this 70 percent contribution --

8 A I've not expressed --

9 Q I'm sorry. Hang on. Let me finish. Based
10 upon your review of the sediment cores? 11:46AM

11 A Okay. You asked me here if I would offer an
12 opinion, and I did. Did I discuss the specifics
13 with respect to contribution from the sediment
14 cores, no.

15 Q Okay. That's an opinion that you came up with 11:46AM
16 today?

17 A Well, that's an opinion that I have adopted
18 and rely upon the opinions of others to generate
19 that information.

20 Q One of the others you mentioned is Meagan 11:47AM
21 Smith and her mass balance study?

22 A That's correct.

23 Q Have you reviewed that study?

24 A I have.

25 Q Does that study purport to show the relative 11:47AM

TULSA FREELANCE REPORTERS
918-587-2878

1 contribution of poultry litter to phosphorus loads
2 in water?

3 A No.

4 Q In Opinion No. 4 you use the term primary to
5 describe poultry litter, a primary or the primary
6 contributor. Do you see that?

11:47AM

7 A Yes.

8 Q What do you mean by primary?

9 A Well, that they're the largest source of
10 contamination of soils with phosphorus within the
11 watershed.

11:47AM

12 Q So your definition of primary is the largest;
13 is that fair?

14 A Source, that's fair.

15 Q So depending on how many sources you have,
16 largest could be 70 percent or it could be 30
17 percent, just the largest?

11:47AM

18 A Well, sure. I mean, the largest is the
19 largest, sort of a plurality, but in this instance,
20 the number of poultry units is so enormous in this
21 watershed, that there is no question, certainly in
22 my mind, that they are the primary contributors to
23 phosphorus in soils, surface waters, groundwaters
24 and sediments.

11:48AM

25 Q And you base that on the number of poultry

11:48AM

1 farms?

2 A I base that upon the mass of material disposed
3 and the concentration of phosphorus in that
4 material, as well as a consideration of other
5 sources, not only the mass balance that Meagan Smith 11:48AM
6 did, and although it's not done in the same way, the
7 same conclusions or essentially the same conclusions
8 are drawn by University of Arkansas experts and the
9 paper by Slaton and others in 2004 published in the
10 Journal of Environmental Quality. I don't think 11:49AM
11 there's actually any, and I mean any, scientific
12 controversy as to the source of phosphorus that's
13 entering the Illinois River watershed from extrinsic
14 sources.

15 Q There's no controversy that it originates from 11:49AM
16 multiple sources; correct?

17 A There's no controversy that the overwhelmingly
18 dominant source is poultry. There also, Mr. George,
19 would be no controversy that there are some other
20 sources. 11:49AM

21 Q What other sources did you investigate, Dr.
22 Fisher?

23 A The other sources that were investigated --

24 Q Hang on. What did you investigate?

25 A That I investigated? 11:49AM

TULSA FREELANCE REPORTERS
918-587-2878

1 water?

2 A Well, it works like this: The feed that is
3 given to the poultry contains phosphorus that is
4 imported into the watershed. That phosphorus comes
5 from extrinsic sources. The cattle, on the other 11:56AM
6 hand, are dominantly living on forage that is being
7 grown with phosphorus that's already been applied to
8 fields largely or significantly through poultry
9 waste. So the cattle are recycling phosphorus in
10 terms of mass balance; whereas, the poultry waste is 11:56AM
11 a contribution from an external source. It's just
12 like economics. You'd rather get money from outside
13 the city than recycling it inside the city if you
14 want to grow wealth, and that's pretty much what has
15 happened here. 11:56AM

16 Q Let's go to Opinion No. 6, Page 18 of your
17 report. Your Opinion No. 6 is that the population
18 of poultry within the Illinois River watershed has
19 shown an overall increase since at least 1950;
20 correct? 11:57AM

21 A That's correct.

22 Q Do you agree that the population of cattle in
23 the Illinois River watershed has shown an overall
24 increase since at least 1950?

25 A The pattern is quite different. 11:57AM

TULSA FREELANCE REPORTERS
918-587-2878

1 how active they are and then some way of relating
2 poultry houses to waste production, but that's at
3 one time slice. To get back in time, then you're
4 required to look at the number of poultry that are
5 allocated in the watershed and then estimate the
6 waste produced by those birds based upon production
7 conditions as they existed at that time, and that's
8 something Meagan Smith worked on.

12:20PM

9 Q Dr. Fisher, have you quantified the amount of
10 poultry litter generated in the Illinois River
11 watershed by farms under contract with the
12 defendants named in this lawsuit?

12:20PM

13 A With respect to what we call the current state
14 of 2005 roughly time horizon, I believe that's true,
15 that I have.

12:20PM

16 Q Okay. Can you show me that figure in your
17 report?

18 A It's Table 6.

19 Q It's the 354,000 figure?

20 A Yes, sir.

12:20PM

21 Q And what time period does that figure apply
22 to?

23 A That figure applies to -- it's a conservative
24 estimate. It's based -- well, we didn't talk about
25 its basis. Its current time period, basically it's

12:21PM

TULSA FREELANCE REPORTERS
918-587-2878

1 2005.

2 Q 2005?

3 A 2005.

4 Q Okay. Have you quantified the amount of
5 poultry litter generated in the Illinois River 12:21PM
6 watershed by farms under contract with the
7 defendants named in this lawsuit for any year other
8 than 2005?

9 A I have not.

10 Q Has anyone? 12:21PM

11 A To my knowledge, no, although it possibly
12 could be done with the information that were
13 provided by defendants.

14 Q But you haven't seen it done yet?

15 A I have not seen it done yet. 12:21PM

16 Q I think we need to change the tape.

17 VIDEOGRAPHER: We are now off the Record.

18 The time is 12:21 p.m.

19 (Following a lunch recess at 12:21
20 p.m., proceedings continued on the Record at 1:34
21 p.m.)

22 VIDEOGRAPHER: We are now on the Record.

23 The time is 1:34 p.m.

24 Q Dr. Fisher, could you turn to Page 21, Opinion
25 No. 8 in your expert report? 01:34PM

1 Q How many active poultry houses were you using
2 for purposes of your calculation of the 354,000 tons
3 of poultry litter?

4 A The number of active houses that we report
5 here, which are present in Table 4, is 1,917 in 01:36PM
6 roughly the time frame circa of 2005-2006. 2005 is
7 kind of a shorthand for the time.

8 Q And that is the beginning point of your
9 estimation process, is that right, the 1,917 active
10 poultry houses? 01:36PM

11 A Yeah. House needs to be one that we
12 identified as being active, that's correct.

13 Q If your number of active poultry houses in the
14 Illinois River watershed is too high, then would you
15 agree your estimate of poultry litter production 01:36PM
16 would, likewise, be biased high?

17 MR. GARREN: Object to form.

18 A Not necessarily. There are a lot of pieces of
19 estimation here. As you can see, in the discussion
20 section this particular mode of estimation produces 01:37PM
21 about 354,000 tons, estimating it based on bird
22 count that Dr. Engel then gives us, about 500,000
23 tons. So it's higher. So they have to look at that
24 within the context of the nature of the estimate and
25 the fact that this is probably a conservative 01:37PM

TULSA FREELANCE REPORTERS
918-587-2878

1 to do that, I know you may have evening plans, but
2 if you could find it this evening and then give me
3 an opportunity to perhaps ask a question about it
4 tomorrow, that would be helpful.

5 A Okay. 01:50PM

6 Q The other two instances where you observed
7 poultry litter are apparently not as memorable to
8 you; is that fair?

9 A They are not as memorable.

10 Q Okay. I assume there was no confrontation or 01:50PM
11 fear on your part associated with those other two
12 instances; is that correct?

13 A No. That's correct. They were incidental. I
14 didn't photograph those. I was doing other things
15 at the time. 01:51PM

16 Q On the bottom of Page 24 and then continuing
17 on to Page 25, you make a point to say that poultry
18 litter, excuse me, is broadcast spread on pastures
19 and hayland within the watershed and is not
20 incorporated into the soil surface by tilling; do 01:51PM
21 you see that?

22 A Yes.

23 Q Okay. It seems to me you take issue with the
24 fact that poultry litter is not incorporated into
25 the soil surface by tilling. Am I reading that 01:51PM

TULSA FREELANCE REPORTERS
918-587-2878

1 correctly?

2 MR. GARREN: Object to form.

3 A No, you're not reading that correctly. I'm
4 simply recording the fact that it is not.

5 Q Is it your opinion that poultry litter should 01:51PM
6 be tilled into the soil in the Illinois River
7 watershed?

8 A I don't have an opinion as to whether or not
9 it should be tilled into the soil. I simply
10 observed that by not tilling it into the soil puts 01:51PM
11 it in a circumstance where it may be more readily
12 transported.

13 Q You, in connection with your work in this
14 case, Dr. Fisher, have had an opportunity to review
15 nutrient management plans issued by the Oklahoma 01:52PM
16 Department of Ag as well as the Arkansas Natural
17 Resources Department; correct?

18 A Yes, I have.

19 Q Do these plans advise users of poultry litter
20 about what they can and cannot do in terms of using 01:52PM
21 poultry litter?

22 A In a general sense, yes.

23 Q Have you seen in any of those plans where the
24 Arkansas Natural Resources Commission or ODAFF has
25 instructed users of poultry litter to till it into 01:52PM

TULSA FREELANCE REPORTERS
918-587-2878

1 the soil?

2 A I have not.

3 Q Have you suggested to Attorney General

4 Edmondson or any of the Oklahoma agencies, including

5 the Oklahoma Department of Ag, that they should 01:52PM

6 consider a requirement that poultry litter be tilled

7 into the soil?

8 , MR. GARREN: Object to form.

9 A No, I have not.

10 Q Let's look at Opinion No. 10, which I'll read. 01:52PM

11 For the Record, your Opinion No. 10 is waste

12 generated by poultry within the Illinois River

13 watershed has been applied near to where it is

14 generated. Did I read it correctly?

15 A You did. 01:53PM

16 Q Okay. Look at Page 26. You are referring to,

17 in the second paragraph, to a dataset that you have

18 reviewed. Do you see that reference for the dataset

19 as a whole?

20 A No, I do not, Mr. George. 01:53PM

21 Q Perhaps I can help you. Right there.

22 A Oh. Yes.

23 Q What dataset are you referring to?

24 A Okay. That is the dataset that is based upon

25 the ODAFF records, the Oklahoma Department of 01:53PM

TULSA FREELANCE REPORTERS
918-587-2878

1 Agriculture, Food & Forestry records.

2 Q Okay, and based upon your review of that
3 dataset, what, if any, opinions have you reached
4 regarding the typical proximity of land application
5 in reference to where litter is generated?

01:54PM

6 A Well, it's stated in the report, based upon
7 review of those records, given the constraints on
8 knowing the -- that you needed to know where the
9 waste arose with respect to its public land survey
10 section, where it was disposed knowing the section
11 of disposal, knowing the date of application and how
12 much was applied given in tons and not in any other
13 units, that given those constraints, that
14 approximately 30 percent of the waste that was
15 generated is land disposed in the same square mile
16 in which it was generated. About 60 percent of the
17 waste was disposed within two miles of where it was
18 generated, and 80 percent was disposed within five
19 miles. This is for Oklahoma as a whole.

01:54PM

01:54PM

20 Q Oklahoma as a whole or the Oklahoma portion of
21 the watershed?

01:55PM

22 A No. There's a second piece of this statement.
23 That's Oklahoma as a whole. Going in the next
24 sentence, it says, likewise, considering only waste
25 generated within the Illinois River watershed. It's

01:55PM

TULSA FREELANCE REPORTERS
918-587-2878

1 similar, but the wastes are generated or are
2 disposed somewhat more closely to where they're
3 generated. For sections that could be identified
4 being clearly totally within the Illinois River
5 watershed, about 30 percent of the waste generated
6 was land disposed within the same square mile, so
7 equivalent to the state as a whole, but only 67 and
8 a half percent or 7 and a half percent more of the
9 waste was disposed within two miles of where it was
10 generated, and 80 percent was generated within 3.6
11 millions, so a little more contiguous to its
12 location of origin than the state as a whole.

01:55PM

01:55PM

13 Q So do I understand then that you hold the
14 opinion that in the Oklahoma portion of the Illinois
15 River watershed, 20 percent of the poultry litter is
16 disposed at a location that's more than 3.6 miles
17 from where it was generated?

01:56PM

18 A Yes.

19 Q Now, the dataset that you're referring to
20 here, is it electronic data or paper records?

01:56PM

21 A Well, it's both really. The Oklahoma
22 Department of Agriculture, Food & Forestry maintain
23 an electronic dataset. They also retain paper
24 records. In reviewing the electronic dataset, I
25 think we determined that there seemed to be some

01:56PM

1 Q For the four-year period from 2004 to 2007,
2 based on my math of Table No. 7, Arkansas Natural
3 Resources Commission had documented about 155,000
4 tons of poultry litter being applied as opposed to
5 generated in the watershed. Do you have any reason 02:27PM
6 to disagree with that?

7 A Wait a second.

8 MR. GARREN: Object to form.

9 A From --

10 Q Four years. 02:27PM

11 A Oh, for all counties, for both counties?

12 Q For both counties in the watershed.

13 A Well, I think that your math is probably -- if
14 your math is correct, then that's what those numbers
15 would reflect but they're way low. They've got to 02:27PM
16 be low.

17 Q Do you have any actual records of litter
18 application in the Arkansas portion of the basin
19 other than Table 7?

20 A No, and evidently no one else does either. 02:27PM

21 Q So let's talk for a moment about what you can
22 actually document with the Record in terms of
23 poultry litter application. We have the figures in
24 Table 7; correct?

25 A Uh-huh. 02:27PM

TULSA FREELANCE REPORTERS
918-587-2878

1 Q For the Arkansas side of the basin, and then
2 where are your Oklahoma documented litter
3 applications? I think it's back further.

4 A Those --

5 Q Table 8. I'm talking about applications, not 02:27PM
6 generation.

7 A I'm looking for Table 8.

8 Q Page 33.

9 A Okay.

10 Q How would I get the total number of tons that 02:28PM
11 you have documented in Table No. 8 as being land
12 applied and the Oklahoma side of the watershed?

13 A Well, this is the road mileage chart. Let's
14 look at your favorite defendant, Tyson Foods.

15 Q They are my favorite. 02:28PM

16 A The location of generation here where the
17 waste is generated, either we don't know where it
18 is. It wasn't listed. It was inside the Illinois
19 River watershed. It was on the border, that is, in
20 some public land survey section bisected by the 02:28PM
21 watershed boundary or clearly outside the watershed.
22 Then we take location of waste disposal. If we take
23 a look there, there is one column that's not given,
24 so you don't know where -- the not given, not given,
25 don't know where it came from, don't know where it 02:29PM

TULSA FREELANCE REPORTERS
918-587-2878

1 went. You have inside -- generated inside the
2 Illinois River watershed and then disposed on the
3 border inside or outside. So if you wanted to look
4 at the total, well, what we know to be or what is
5 reported to have been disposed of completely within 02:29PM
6 a section within the boundaries of the Illinois
7 River watershed, it would be the column total within
8 Tyson Foods that's under inside Illinois River
9 watershed, was clearly not disposed within the
10 Illinois River watershed would be the column total 02:29PM
11 outside the Illinois River watershed, and what would
12 be -- could be disposed is the border of the
13 Illinois River watershed, could be and could be out,
14 and what we don't know is, of course, the first
15 column total. 02:30PM

16 Q Okay. So if I wanted to know -- strike that.
17 What's the time period of record for Table 8?

18 A I have to look. It's -- the time period of
19 record for Table 8 is basically a time period of
20 record in which reporting of this was required. 02:30PM

21 Let's see. I know that that's mentioned in here.
22 Oh, here we go. Disposal records extend from 1999
23 to 2004. That's on Page 31 under No. 12. That's
24 the basis of that, and most of those are from the
25 later period. 02:31PM

1 Q 1999 to 2004?

2 A Right, but the reporting in '99 is pretty
3 desultory. It was not required at that time, and
4 the number of reports seemed to increase a bit
5 through time. So I don't think that these purport
6 to be a full census of disposal.

02:31PM

7 Q If you look on the preceding page at Page
8 32 --

9 A Uh-huh.

10 Q -- about six or seven lines up from the bottom
11 there's a statement by you that as a consequence a
12 total of 116,401 tons were disposed entirely within
13 the Oklahoma portion of the Illinois River
14 watershed; do you see that?

02:31PM

15 A Right, according to these ODAFF records.

02:31PM

16 Q If I added up the column that you pointed me
17 to on Table 8, the Illinois River watershed tons?

18 A I sincerely hope that you would get that
19 number.

20 Q That is what was intended.

02:32PM

21 A Yeah.

22 Q The tally at the bottom of this chart should
23 be 116,401 tons?

24 A That's correct.

25 Q Okay, and those are the sum total of tons

02:32PM

TULSA FREELANCE REPORTERS
918-587-2878

1 within the Oklahoma portion of the basin for which
2 you have documentation or record of land application
3 of poultry litter from 1999 to 2004; correct?

4 A Okay. I would say that's the sum total of
5 tonnage that has been reported to the Oklahoma
6 Department of Agriculture, Food & Forestry for
7 things that are clearly -- I mean, they're
8 identified as to their location of disposal.

02:32PM

9 Q All right, but you don't have any records
10 outside of the Oklahoma Department of Ag as to the
11 tonnages that are land applied within the Oklahoma
12 portion of the basin, do you?

02:32PM

13 A No.

14 Q Okay. So based on the records and information
15 you have, this is the most that you've been able to
16 document from those records as land applied from
17 1999 to 2004 in the Oklahoma portion of the basin?

02:32PM

18 A Right, remembering, of course, that the
19 records in 1999 are very thin, and that this is
20 probably not a census of -- well, it is not a census
21 of disposal.

02:33PM

22 Q Okay. So if -- now that we've dealt with the
23 Oklahoma portion, if you'll flip back to Table 7,
24 this is the Arkansas records you have of land
25 application in the Illinois River watershed in terms

02:33PM

1 of tonnage; correct?

2 A Yes.

3 Q Okay. Now, I told you earlier and if you'll

4 trust my math, it's about 155,000 tons over this

5 four-year period. Okay? So do I understand 02:33PM

6 correctly then that if you add those two things

7 together, out of the 354,000 tons that you estimate

8 is produced every year, you can only identify a

9 total of about 280,000 tons over a five-year period

10 that has actually been land applied? 02:33PM

11 A Well, that's what's been reported.

12 Q That's the best you can do?

13 A It's the best anybody can do.

14 Q Let's change tapes.

15 VIDEOGRAPHER: We are now off the Record. 02:34PM

16 The time is 2:34 p.m.

17 (Following a short recess at 2:34 p.m.,

18 proceedings continued on the Record at 2:44 p.m.)

19 VIDEOGRAPHER: We are now on the Record.

20 The time is 2:44 p.m. 02:44PM

21 Q Dr. Fisher, I think you have something to say.

22 A Yeah, I did. In looking at Footnote 85, it

23 jogged my memory when I looked down at the bottom,

24 thinking about dry waste and volume, dates number

25 for George's and also information pertaining to 02:44PM

**TULSA FREELANCE REPORTERS
918-587-2878**

1 Cal-Maine, and for those folks, those defendants,
2 there are application records for liquid waste
3 because that was regulated. There are at least
4 records for application sites for George's as I
5 recall, and then there are documents pertaining to
6 application from Cal-Maine. I just wanted to amend
7 that, that application records would also be
8 considered, not just nutrient management plans.

02:45PM

9 Q Well, let's step away from that to a related
10 topic. On Page 31, the opinion that you've
11 expressed, and it's based on at least in part Table
12 8 that we've discussed at length now, is that all
13 defendants have disposed of poultry waste within the
14 Illinois River watershed; do you see that?

02:45PM

15 A Yes.

02:45PM

16 Q Okay. Other than perhaps the liquid
17 application records for George's and Cal-Maine that
18 you just referred to, do you have any evidence of
19 the other integrators named in this lawsuit land
20 applying poultry litter within the Illinois River
21 watershed?

02:45PM

22 A Aside from whatever evidence might exist in
23 the ODAFF records, no.

24 Q Okay, and as we sit here today, I think we've
25 covered --

02:46PM

1 A Well, the ODAFF records, investigator records,
2 things of that nature.

3 Q As we sit here today, you cannot identify a
4 particular instance in which an employee of Tyson
5 Foods or Cobb-Vantress or Peterson Farms or Simmons 02:46PM
6 or George's has land applied poultry litter within
7 the watershed?

8 A Not --

9 MR. GARREN: Object to the form.

10 A Not right at this moment. Well, let me think. 02:46PM
11 You said again -- name those integrators again.

12 MR. GEORGE: Can you read it back?

13 (Whereupon, the court reporter read
14 back the previous question.)

15 A Well, poultry waste within the watershed with 02:46PM
16 respect to George's could be identified.

17 Q And the distinction you're making is that
18 liquid poultry manure might not be poultry litter?
19 I'm trying to understand the point.

20 A I think the common terminology is that it's 02:47PM
21 the liquid waste as opposed to a dry waste.

22 Q Okay.

23 A But if we could just agree -- I guess we could
24 agree to not differentiate them. That would be
25 fine, too. 02:47PM

1 Q All right. Let's go back for just a moment to
2 Table 6 on Page 24, which is the table that supports
3 your 354,000 ton annual estimate of poultry litter
4 produced in the watershed; correct?

5 A Yes. 02:47PM

6 Q Okay. If we assume for a moment and for
7 purposes of this question, at least, let's assume
8 that that figure would be applicable for the period
9 of 1999 through 2004, a five-year period, okay,
10 354,000 tons each year. That would mean that in 02:48PM
11 that time period, if my calculator is correct, there
12 would have been about 1.77 million tons of poultry
13 litter produced; does that sound about right?

14 A Yes.

15 Q Okay. For that same period of record, 1999 to 02:48PM
16 2004, if you look at Table 8 and Table 7, how many
17 tons of actual litter application in the watershed
18 have you been able to document and quantify?

19 A I think, according to what we had discussed
20 earlier about 300,000 tons total, but we know that 02:48PM
21 these records are incomplete and inaccurate.

22 Q So you do not have accurate records that would
23 allow you to offer an opinion as to the location of
24 the missing 1.4 million tons of poultry litter
25 produced in the watershed during that five-year 02:49PM

TULSA FREELANCE REPORTERS
918-587-2878

1 period?

2 MR. GARREN: Object as to form.

3 Q Is that fair?

4 A I think that's quite fair. We can see in
5 these records that things don't add up, that there
6 are too many chickens for the waste reported or that
7 the waste reported in terms of stored, transferred
8 off site or disposed is at dissidence with the total
9 produced. They produce less than they dispose.

02:49PM

10 Q In the watershed?

02:49PM

11 A Yes.

12 Q All right. On Opinion No. 14, let's move on
13 to it beginning at Page 34 of your report, I'll read
14 your opinion. The mass of poultry waste generated
15 within the Illinois River watershed but disposed
16 outside the watershed is a minority of the waste
17 generated within the watershed; correct?

02:50PM

18 A Yes. As contorted as that sentence might be,
19 that is correct.

20 Q Okay, and your support for that statement, if
21 I've read your report correctly, is the information
22 supplied by George's regarding its own hauling, as
23 well as information obtained from BMPs,
24 Incorporated; correct?

02:50PM

25 A That's correct.

02:50PM
